Important Information

In 2015 bycatch classifcations were changed to reflect river herring catch limits. HIGH bycatch events now relfect a rate at which river herring catch limits will be reached before Atlantic herring catch limits. This resulted in lowering the HIGH bycatch threshold (1.25% prior to 2015).

Information on this website is cumulative but fleet advisories only include information less than one week old

Cell classifications are determined by most recent catch

All catch information comes from portside state samplers or at-sea federal observers

Numbers inside of a cell indicate the number of tows within the cell.

A single tow may occur in several cells

Area 2

- Low (less than 0.3% River Herring and Shad)
- Moderate (0.3% to 0.6%)
- High (above 0.6%)

Cape Cod

- Low (less than 0.15%)
- Moderate (0.15% to 0.3%)
- High (above 0.3%)
