Important Notes

Information on this website is cumulative but fleet advisories only include information less than one week old

Cell classifications are determined by most recent catch

Combine the row letter and column number to get the cell name

Grid lines follow 10' longitude and 5' latitude lines

Numbers inside of a cell indicate the number of tows within the cell.

A single tow may occur in several cells and vessles generally tow in pairs.

Catches with high or moderate amounts of river herring or shad outside of grids are shown with location determined by best estimate using tow locations

- Low (less than 0.2% River Herring and Shad bycatch)
- Moderate (between 0.2% and 1.25%)
- High (above 1.25%)

Last Update:4/5/13
Vessel Samples: 54
