Important Notes

Information on this website is cumulative but advisories only include information less than one week old

Combine the row letter and column number to get the cell name

Grid lines follow 5' longitude and 2.5' latitude lines

Cell classifications determined by most recent catch or advisory

Numbers inside of a cell indicate the approximate number of trips within the cell. One trip can occur in multliple cells

Only catches with high or moderate amounts of river herring and/or shad outside of grids are shown with location determined by best estimate using tow locations

Low (less than 1.5% River Herring and Shad bycatch)

Moderate (between 1.5% and 5%)

High (above 5%)

Last Update:2/15/12
